It is presented to the architectural and engineering professions with the thought that it may be the means of shortening and possibly eliminating much of the computation and drudgery which are necessary accompaniments of structural designing. It is hoped that it may prove useful to the expert designer, since the diagrams presented are time-saving devices; useful and suggestive to the non-expert and the student, since the diagrams illustrate graphically the relations of the various factors of proportion, span loading, etc., for the variable conditions of ordinary practice. Throughout the work the New York Building Code has been followed, because it is everywhere recognized as conservative and safe.
